PROACTIVE PRECISION PERFORMANCE

PROACTIVE NERVE LOCATION INSTRUMENTS

- Turn-key solution allows more effective and efficient procedures
- Intelligent design combines dissection and identification
- Standard forcep designs for superior performance
- Single-use, monopolar stimulation and universal compatibility

Scorpion is a stimulating surgical instrument, the intelligent design features IOM technology that allows surgeons to map nerves in real-time. The delivery of continuous stimulation allows for uninterrupted dissection and flow of the procedure. Scorpion instruments deliver exceptional response and integrity for a variety of surgical procedures where motor nerves are at risk.
KEY FEATURES

- Engineered with surgical grade stainless steel for optimal response, durability and integrity

- NEW robust and reliable coating ideal for electrical insulation, thermal conductivity with maximum strength and gliding properties

- Available in a variety of patterns to meet various surgical applications and individual preferences

- Innovative design for superior products for optimal surgical performance and maximize nerve identification
